Hi (b)(6) privacy thanks for your email. The effort to develop information as part of the Pavillion groundwater investigation is ongoing and the science we've collected to date will be reviewed by an independent panel within the next few months. As you know, EPA issued a draft report (link on the top right of the web page below) last December. This report and data we collected with USGS this summer is also currently the subject of a public comment process.

Subject: EPA's finding on Pavillion, Wyomings

Hello,

I am currently writing a paper for school on fracking. I wanted to know what were the final results of the survey in Pavillion, Wyoming. I just want to know if there was evidence or a link that fracking is causing the contamination to the underground water aquifers. I tried to read the report but it was too complicated and full of charts. I just wanted to know the bottom line did fracking cause the water to contaminate. Please if you could respond to me as soon as possible I would appreciate it.

Thank-You
